

Review of the article by (name of the authors) [REDACTED]  
[REDACTED]

The article under review contains 13 text pages with line spacing 1.0 and type size 14. It contains a reference list of six sources, all of them are in Russian.

The article dwells on a topic [REDACTED] which is relevant for Astrakhan region. This sector is important for the socioeconomic development of the region. The paper contains detailed tables, describing [REDACTED], and these tables account for 45% of the article size. All the materials were taken from statistical books on Astrakhan region which are publicly available online. However, they haven't been published in scientific journals before.

The following remarks should be made in relation to the article:

1. The reference list of six sources for the article with such a name looks incomplete in terms of coverage of the issue stated. As a result, the literature review, presented by the authors at the beginning of the article, looks fragmentary. There is quite a large number of published papers on the issue of the regional tourist cluster management, including for Astrakhan region.

2. The statistical indices, included in the article, are not treated mathematically, no models are built in their relation, etc. There is also no generalization of the statistical data, though they form almost a half of the article size.

3. The paper also does not address the issues of application of information and telecommunication technologies for management of the Astrakhan tourist cluster.

4. The conclusions and recommendations on the regional tourist cluster management are mostly of general management and do not result from the article content directly. There are almost no recommendations on peculiarities of Astrakhan region with regard to the tourist cluster management.

5. In general, the article under review is of a clearly economic nature by its topic and content and does not correspond to any section of journal "Caspian Journal: Management and High Technologies".

With regard to the above remarks, I find it unfeasible to publish the paper in journal "Caspian Journal: Management and High Technologies". I would recommend that the authors submit it to another journal that publishes economic articles.
